EXPERIENCE

Advicee Agency | Founder & Lead Developer

2025-Present

- Built a CRM used by 10 staff to manage 200+ students and 500+ applications, replacing spreadsheets, paper records, and Google Forms with one system for applications, documents, payments, and expenses.
- Designed dashboards that show what needs attention, who owns each task, and how applications are progressing.
- Built an AI assistant with read-only access to selected database tables, used daily by staff to ask questions like "show spring 2027 applications grouped by student, with universities and majors" and get answers instantly instead of clicking through the interface. Secured with token-protected access and query limits.

Proteco Sharq | Full-Stack Developer

2025

- Built an admin application for inventory, sales, and deliveries so staff could follow orders through fulfillment.
- Developed a Telegram bot for browsing products and placing orders, handling up to $2,000 in daily sales and connected to the admin system. Maintained and monitored the system for 6 months under a client contract.

Oy-gul.uz | Full-Stack Developer

2024

- Owned the real-time chat service for a flower marketplace with 20+ shops, with order tracking built into conversations so staff can follow a customer's chat and their orders in one place.
- Implemented live text and media exchange across web and native apps using Socket.io, with web and mobile notifications.
- Containerized the service with Docker, wrote its Docker Compose configuration, and deployed through on-premise GitLab CI/CD with guidance from the DevOps engineer.
- Worked in a team using GitLab branches, merge requests, and code reviews.

PROJECTS

GKS Universities | gks-universities.vercel.app

- Built university search, program filters, and side-by-side comparisons to help Global Korea Scholarship applicants narrow their options.
- Reduced initial JavaScript and CSS by removing unused code and lazy-loading non-critical components, reaching a 97 Lighthouse Performance score (100 Accessibility, Best Practices, and SEO).

Tokcha Shop | Storefront & Shop Management

- Built a catalog, inventory, and sales system for a retail shop, with QR-assisted receiving, stock counts, and checks against overselling and duplicate changes.
- Automated product publishing to a Telegram channel, keeping posts updated as prices and availability change, with retries and recovery for failed posts. Designed as a reusable product for other shop owners.

Korean Universities | In Development

- Building an independent admissions website to help applicants explore Korean universities and understand application requirements.
- Using AI-assisted extraction to structure official admission guides, preserving sources and checking results against original documents.

Portfolio Sites

- Personal portfolio (maxmud-dev.uz) with expandable project previews, multilingual content, and an optional simpler layout. Also built responsive portfolio sites for a DevOps engineer (adkhamsec.uz) and an English teacher.

PROFILE

Frontend developer building React, Next.js, and TypeScript applications, including a CRM used daily by 10 staff to manage 200+ students and 500+ applications, and a university search site with a 97 Lighthouse Performance score. Experienced in team workflows (GitLab, code reviews, CI/CD) and in optimizing for speed and usability.

SKILLS

Performance optimization: bundle reduction, code splitting, lazy loading, Lighthouse auditing
Responsive interfaces and accessibility
Dashboards and data-heavy admin interfaces
Real-time messaging (Socket.io)
API integration
AI and LLM integration

TECH STACK

Frontend
JavaScript, TypeScript, React, Next.js, Vue, HTML, CSS, Tailwind CSS, shadcn/ui, TanStack Query

Backend & Data
Node.js, Express, REST APIs, Prisma, PostgreSQL, SQLite, Redis, Socket.io

Tools
Git, GitLab CI/CD, Docker, Docker Compose, Linux

SYSTEMS KNOWLEDGE

SSR, SSG, technical SEO, clustering, load balancing, message brokers, background processing

AI-ASSISTED DEVELOPMENT

Codex, Claude Code, Antigravity

I use AI tools to write, review, and debug code, and to run browser-based UI and visual checks.

EDUCATION

Bachelor of Computer Engineering
Dongseo University
South Korea | 2018-2023

LANGUAGES

English - C1
Russian - B2
Uzbek - Native
